

Data Feeds

EEDAR is a recognized leader for game feature data, holding the Guinness World Record for the largest database of videogame facts in the world. With more than 50 million game facts known on physical box products, digital games and digital content, EEDAR can create a custom data feed with the breadth or depth needed for your exact requirements.

100% INTERNALLY SOURCED

Unlike other meta-data providers for video game products, EEDAR collects all data internally ensuring consistent quality and definitions of information.

EEDAR boasts an internal library of every physical and digital game released since 2005 allowing us to collect any additional information required for your specific data needs.

DESCRIPTIONS, SCREENSHOTS & TRAILERS

Besides our incredibly deep meta-data, EEDAR can also provide ESRB and PEGI compliant game descriptions for all physical and digital products. Screenshots and trailers are also available for titles released since 2009. EEDAR hosting of screenshots and trailers via CDN also available.

HIGH QUALITY BOX ART

Represent each product in its best light with high quality box art from EEDAR. Box art can be supplied in high-resolution formats or pre-sized to match the exact needs for your services as part of your data feed. EEDAR hosting of art images via CDN also available.

DOWNLOADABLE CONTENT SUPPORT

EEDAR is the world's leading provider of downloadable content (DLC) meta data and research. Extend your retail opportunities by augmenting your services with detailed information on the additional purchases available for supported games.

SEARCH AND DISCOVERY OPTIMIZED

EEDAR's world leading approach to data collection for video games allows for meta-data to be supplied in a manner that is highly optimized for search and discovery purposes. EEDAR can even generate weighted index values and other weighting attributes to assist with your specific implementations.

KEY POINTS

- Consistent, high quality feature data produced 100% by EEDAR
- ESRB & PEGI compliant descriptions, screenshots and trailers
- High quality box art for games, hardware and accessories
- Meta-data optimized for search and discovery
- Complete coverage of physical and digital products
- Multiple language support

MULTI-LINGUAL SUPPORT

EEDAR data feeds natively support English, Spanish and French. If you require additional languages these can be integrated in short-order upon request.

FLEXIBLE INTEGRATION OPTIONS

EEDAR offers data feeds in a number of integration offers and can provide engineering support to customize each data feed service to your specific needs. Flat files, web-services or pre-configured databases are just a number of options available. Our experienced professionals can even retrofit our feeds to match any existing feeds you may be using as you transition over to our service.
